

Safety switches

OVERVIEW OF THE PRODUCTS

Electro-mechanical safety switches, non-contact safety switches, safety locking devices, safety command devices

SICK
Sensor Intelligence.

SAFETY SWITCHES

Safety switches are indispensable in any application where safety is required for people and machinery. They are used for monitoring movable physical guards, determining the position of dangerous movements, and the safe stop function. The portfolio is divided into electro-mechanical and non-contact safety switches, safety locking devices, and safety command devices. In conjunction with safe control solutions, SICK offers ideal complete solutions from a single source.

General information	3
Electro-mechanical safety switches	8
i12S, i16S, i17S, i110S, i10P, i10R, i110P, i110R	
Non-contact safety switches	12
RE1, RE2, STR1, IN3000 Direct, IN4000 Direct	
Safety locking devices	14
TR10 Lock, i14 Lock, i10 Lock, i110 Lock, i200 Lock	
Safety command devices	16
ES11, ES21, ER12, i110RP, i150RP, E100	

Application areas:

Door monitoring without locking

Door monitoring with locking

Safety commands

How to find the right safety switch for the safety task → **Page 6****Design and selection of interlocking devices in accordance with EN ISO 14119**

The international standard EN ISO 14119 defines the guidelines that shall, regardless of the type of technology being used, be applied when designing and selecting interlocking devices associated with physical guards.

Critical situations arise during every attempt to manipulate or bypass installed protective devices. SICK offers uncoded as well as safety switches with a low or high coding level in order to satisfy the manipulation protection requirements.

The high coding level makes additional measures for manipulation protection unnecessary during mounting and still fulfill the requirements of standard EN ISO 14119.

Measures for manipulation protection in accordance with EN ISO 14119 (examples)	No or low coding level (e.g. electro-mechanical safety switches)	High coding level (e.g. transponder safety switches)
Mounting outside of reach of the operator		
Physical obstruction or shielding		
Mounting in hidden position		
Status monitoring or cyclical testing		

= No measure required.

= The application of at least one of these measures is required.

→ www.sick.com/8017392 (White paper "Design and selection of interlocking devices in accordance with EN ISO 14119")

THE RIGHT SOLUTION FOR EVERY REQUIREMENT

Different sectors, different tasks, different requirements – modern industry is becoming more and more heterogeneous. Good thing there is a reliable partner in this area: SICK. SICK has a suitable solution for sensor wiring for every customer.

- For the conventional machine builder who produces compact machines and wires the required sensors individually
- For the manufacturer of machine system who wants to wire several simple protective devices safely
- For the producer of flexible machine modules who would like to cascade a wide range of safety sensors and pays close attention to safety and diagnostic information

When the decision is hard: The selection of the right wiring method

→ www.sick.com/eliminate_fault_masking

→ www.sick.com/8018283 (Special information "Safe series connection")

SICK SOLUTIONS

	Individual wiring	Series connection of sensors with volt-free contacts	Series connection of sensors with monitored semi-conductor outputs	Safe series connection with Flexi Loop
Safety	★★★★★	★☆☆☆☆	★★★★★	★★★★★
Diagnostics	★★★★★	★☆☆☆☆	★★★★★	★★★★★
Wiring	★☆☆☆☆	★★★★★	★★★★★	★★★★★
Cost effectiveness	★☆☆☆☆	★★★★★	★★★★★	★★★★★
Flexibility	★★★★★	★☆☆☆☆	★☆☆☆☆	★★★★★
Classification	The safe and established solution	The low-cost solution for low safety requirements	The safe solution for sensors with semi-conductor outputs	The flexible, innovative and safe solution

AN OVERVIEW OF THE MOST IMPORTANT FEATURES OF THE SAFETY SWITCHES

	Safety application	Important selection criteria	Manipulation protection with the coding level of the actuator (EN ISO 14119)	Product group	Products	from page	
Interlocking movable physical guards							
	Interlocking with guard locking	Power to release principle	Low coding	Safety locking devices	i14 Lock, i10 Lock, i110 Lock, i200 Lock	14	→
			Low / high coding		TR10 Lock	14	
		Power to lock principle	Low coding		i10 Lock, i110 Lock, i200 Lock	14	
			Low / high coding		TR10 Lock	14	
	Interlocking without guard locking	Retaining force required	Low coding	Safety switches with separate actuator	i12S, i16S, i17S, i110S	8	
		Retaining force not required		Magnetic safety switches	RE1, RE2	12	
			Low / high coding	Transponder safety switches	STR1	12	
Safe position monitoring							
	Monitoring of machine stop positions	Activation mechanical ^{*)}	No coding	Safety position switches	i10P, i10R, i110P, i110R	10	→
		Activation with metal ^{**)}		Inductive safety switches	IN3000 Direct	12	
		Activation with coded actuator ^{**)}	Low / high coding		Transponder safety switches	IN4000 Direct	
				STR1		12	
Safety commands							
	Emergency stop	Triggering emergency stop at defined positions	–	Emergency stop pushbuttons	ES11, ES21	16	→
		Triggering emergency stop throughout the entire distance	–	Rope pull switches	110RP, 150RP	16	
	Reset of protective device	–	–	Reset pushbuttons	ER12	16	
	Manual approval for maintenance and setup mode	–	–	Enabling switches	E100	16	

^{*)} Activation mechanical: Switch off when activated.

^{**)} Activation with metal or coded actuator: Switch on when activated.

ACHIEVABLE PERFORMANCE LEVEL FOR THE SAFE EVALUATION UNIT AND THE SAFETY SWITCH

¹⁾ PL d with fault exclusion.

²⁾ Recommended for applications without overrun movement since the time delay cannot be set via the safe evaluation unit.

³⁾ PL e with integrated dropout protection contact (additional contact which monitors the correct position of the contact block in the built-in version of the emergency stop pushbutton).

⁴⁾ Depending on the frequency of activation (EN ISO 14119, 8.2).

⁵⁾ Can only be combined with magnetic safety switches with equivalent contacts (RE13, RE23, RE27).

⁶⁾ Only with series connection of one normally closed and one normally open each.

SERVICES FOR MACHINES AND SYSTEMS: SICK LifeTime Services

Our comprehensive and versatile LifeTime Services are the perfect addition to the comprehensive range of products from SICK. The services range from product-independent consulting to traditional product services.

Consulting and design

Safe and professional

Product and system support

Reliable, fast and on-site

Verification and optimization

Safe and regularly inspected

Upgrade and retrofits

Easy, safe and economical

Training and education

Practical, focused and professional

SICK AT A GLANCE

SICK is a leading manufacturer of intelligent sensors and sensor solutions for industrial applications. With more than 8,000 employees and over 50 subsidiaries and equity investments as well as numerous agencies worldwide, we are always close to our customers. A unique range of products and services creates the perfect basis for controlling processes securely and efficiently, protecting individuals from accidents and preventing damage to the environment.

We have extensive experience in various industries and understand their processes and requirements. With intelligent sensors, we can deliver exactly what our customers need. In application centers in Europe, Asia and North America, system solutions are tested and optimized in accordance with customer specifications. All this makes us a reliable supplier and development partner.

Comprehensive services round out our offering: SICK LifeTime Services provide support throughout the machine life cycle and ensure safety and productivity.

For us, that is “Sensor Intelligence.”

Worldwide presence:

Australia, Austria, Belgium, Brazil, Canada, Chile, China, Czech Republic, Denmark, Finland, France, Germany, Great Britain, Hungary, India, Israel, Italy, Japan, Malaysia, Mexico, Netherlands, New Zealand, Norway, Poland, Romania, Russia, Singapore, Slovakia, Slovenia, South Africa, South Korea, Spain, Sweden, Switzerland, Taiwan, Thailand, Turkey, United Arab Emirates, USA, Vietnam.
